- hidden state - short term memory
- cell state - long term memory

cosine similarity:

$$\frac{\sum_{i=1}^n A_i B_i}{\sqrt{\sum_{i=1}^n A_i^2} \sqrt{\sum_{i=1}^n B_i^2}}$$

Run $\leftarrow A = \begin{bmatrix} A_1 & A_2 \\ 0.6 & 0.8 \end{bmatrix}$

<EOS> $\leftarrow B = \begin{bmatrix} B_1 & B_2 \\ 0.7 & 0.2 \end{bmatrix}$

Calculation:

$$(0.6 \times 0.7) + (0.8 \times 0.2) = 0.58$$

Attention $\rightarrow$ sentence w.r.t. your output token

(1) Calculate Embedding

Run to the store, Sale is on.

10 dim
embedding

$$d_{\text{model}} = 10$$

(2) positional encoding

$$PE(pos, 2i) = \sin \frac{pos}{10000^{\frac{2i}{d_{model}}}}$$

$$PE(pos, 2i+1) = \cos \frac{pos}{10000^{\frac{2i}{d_{model}}}}$$

pos - position index of the word in the sequence

i - index of the embeddings dimension

d - total embedding size

$10000^{(2i/d)}$ - scaling factor that controls the frequency of sin and cosine waves

$i=0$

$$PE(pos, 0) = \sin \frac{0}{10000^{\frac{2 \times 0}{10}}} = \leftarrow$$

$$\begin{aligned}
 i=0, & \quad 10000^0 = 1 \\
 i=1, & \quad 10000^{0.2} = \times \\
 i=2, & \quad 10000^{0.4} =
 \end{aligned}$$

$\cos 2$

$\sin 2$

$\cos 1$

$\sin 1$
