

Agenda — 25-01-2025

— Project

— git ✓

— rules ✓

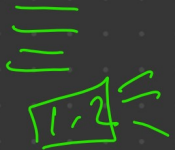

— lead & managers

— Task this week

— visualization tool — Data

— project structure

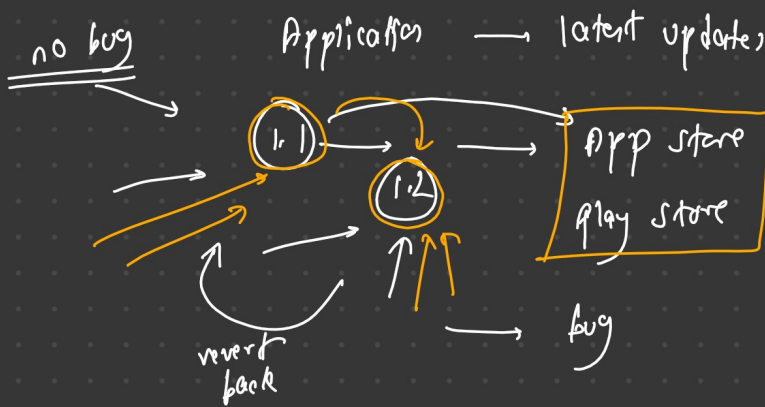

— demo

git is used to version control your code.

git

github

DVC → data

25-Jan → 10,000

1000

v1.0 → 1000
v1.1

→ Git Fork

→ Git branch

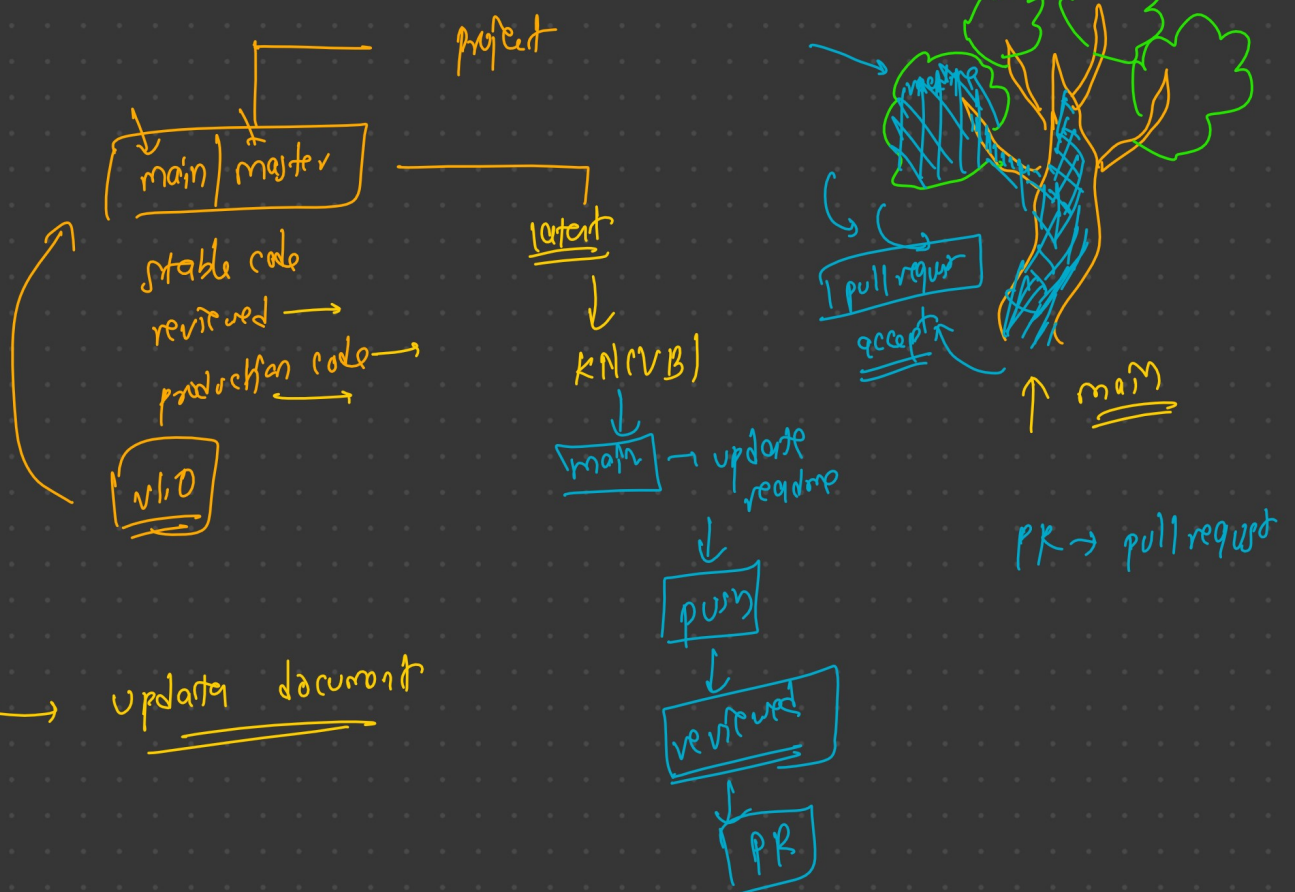

→ Git clone http: —

→ need to create a different branch — new functionality

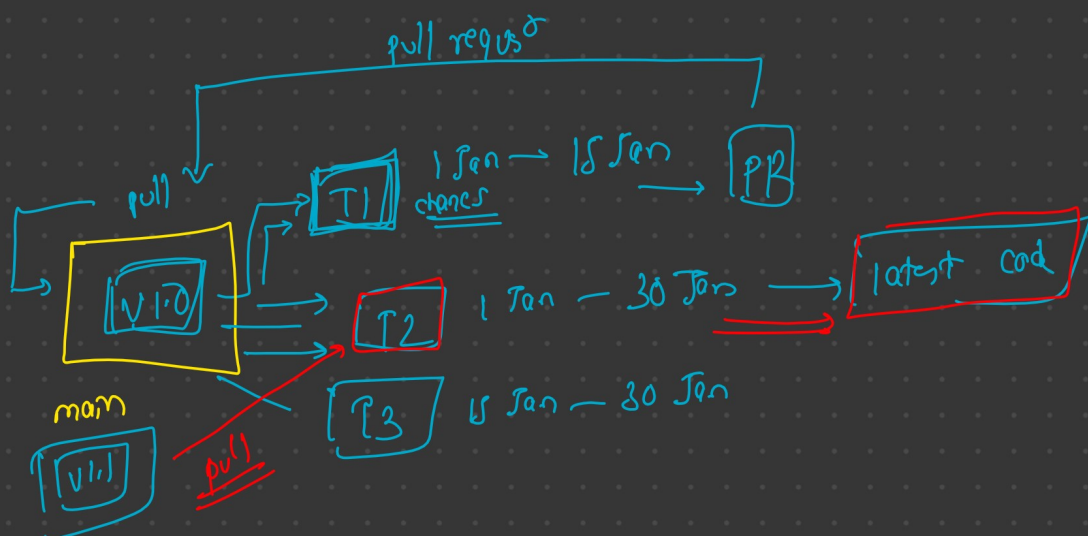

— [X] — [3 people] —

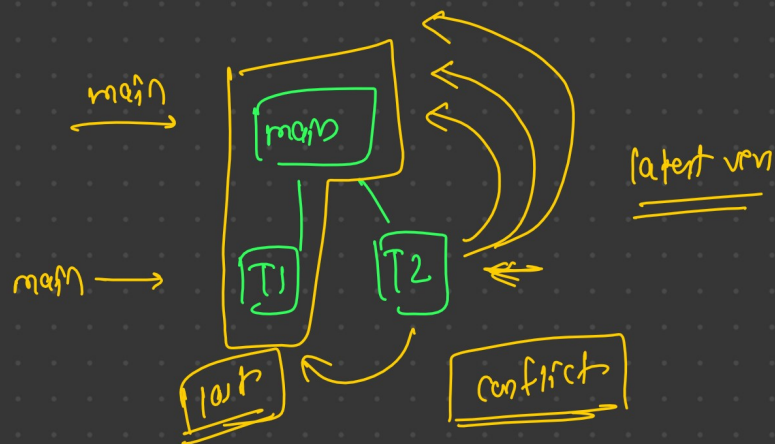

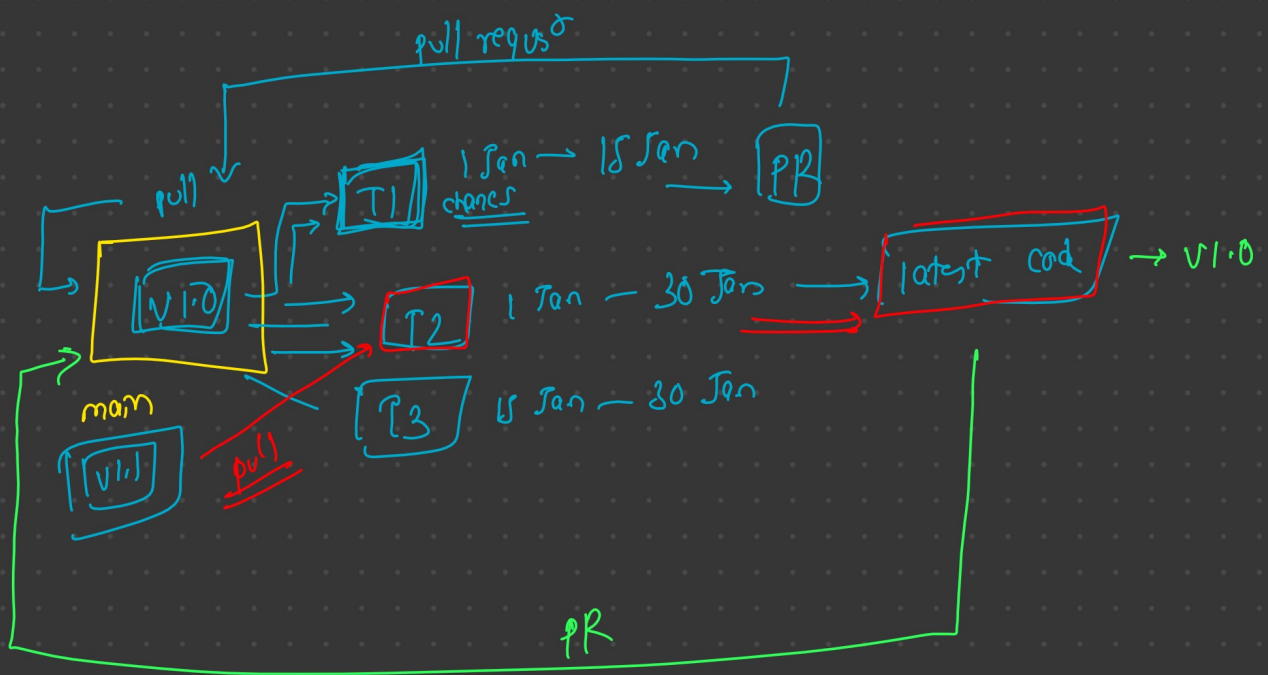

— 1

— 2

X → update document

pull → code X branch code in my current branch.

pull request → Admin → pull this code you will get additional functionality

Config.yaml $\longrightarrow$ configuration
 $\uparrow$
config.py $\longrightarrow$ loading content of yaml

T1 $\longrightarrow$ create new config,
core / backend / classification $\begin{cases} c-1.py \longrightarrow \boxed{\text{reset 34}} \\ c-2.py \end{cases}$
core / backend / detection $\longrightarrow$ $\boxed{\text{Holovs / V8}}$ $\longrightarrow$ class Detect()
 $\searrow$ $\boxed{\text{detect}}$

map

detection.py

plots $\longrightarrow$

prepare

$\boxed{\text{Detect}}$ $\longrightarrow$ video, if come

Scenarios 1:

we want to implement script where:

if person is coming towards us →

we should create some alert

→ Input stream

→ detect person

To do

api(video.mp4, person)

S1.py

S2.py

S3.py

api → VISHVA, 25-01-2020

←

⌋

delete →

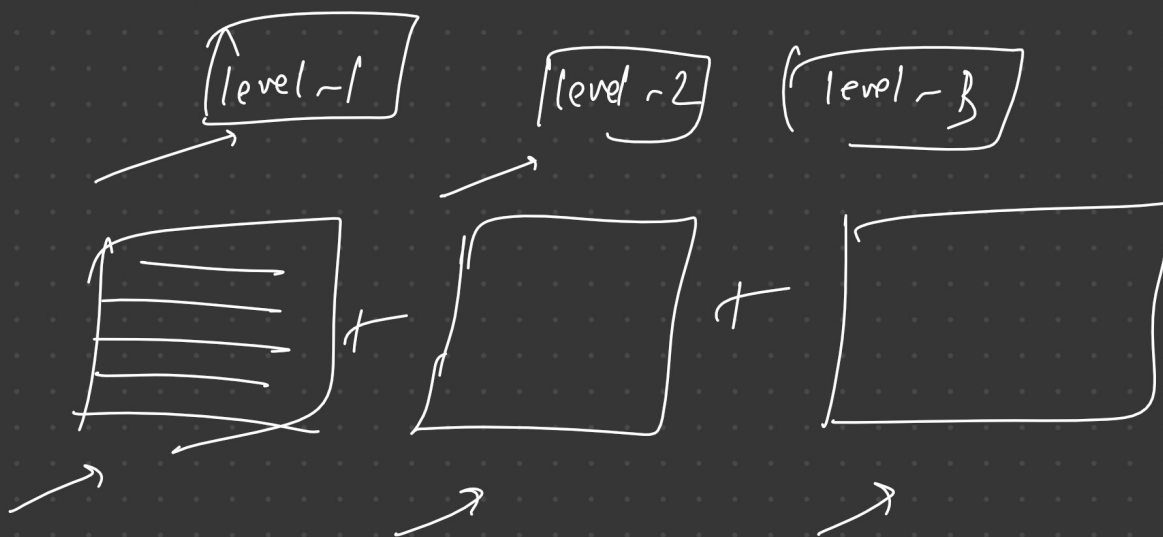

25-01-2020

python man.py

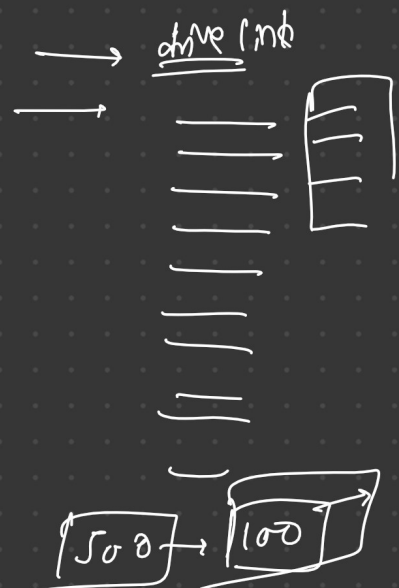

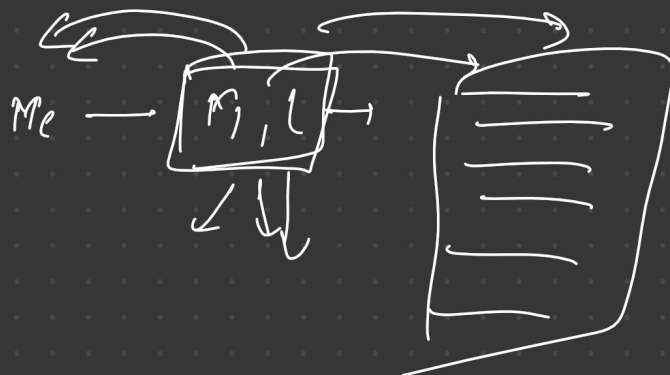

→ api for

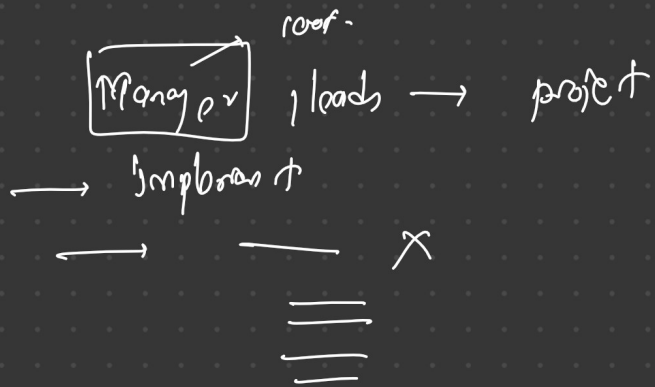

→ api should be quibb to use part:

api:

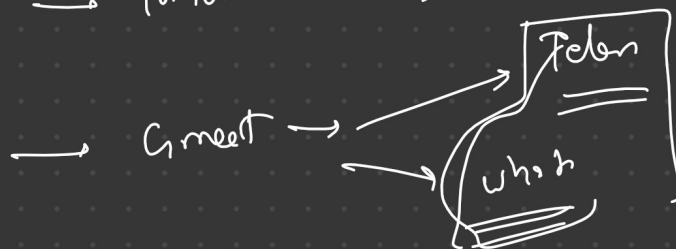

Group 1: _____

→ Tomorrow EOD

→ one →

→ validation → voce
